

Project Proposal

Ismet Okan Celik

Project Name: Project Management Software

My project is about building a project management system that makes it easier to track all the tasks in a team. It will allow people to see which person is working on what project in the team. Team leaders will be able to assign a task to team members and see the status of a given task. In addition, team members can ask for help or request deadline extensions if things don't go as expected. Communication is crucial, and this system will make it easier for teams to communicate and deliver projects on time.

1. Tasks

The assigned tasks will show in this column for each team member. This given task also has a short description. Anyone in the team who wants to learn about this task can see the full report with some commands.

2. Status

Team members will be able to update their status about the given task. For example, if any person working on a project makes their status about the project "In Progress" when they completed the given job, they will update it as "Completed".

3. Help

Not everybody asks easily for help in person, but it's also an important thing to do. If someone stuck at some part of the given task, the person would be able to define what is the problem that needs help. Anyone on the team who has an idea about solving the problem may help that person.

4. Priority

One team member might be assigned more than one task. In this situation, a person needs to divide their time between tasks. Therefore, I am also planning to add a priority section showing the tasks' importance. This section will grade the tasks between 0 to 5. If the priority is "5", this represents high priority, and if the number gets smaller, it means it is less critical.

More features might add to the project during the development process. This report shows a general description about what is the main framework of the project. The designed draft main frame is below. It may change during the process of programming.

Name	Task	Status	Exp. Deadline	Help	Priority
Micheal	App Development	In Progress	11.25.2022	Yes	5
John	Website Design	In Progress	12.23.2022	No	5
John	Debugging	In Progress	02.02.2023	No	2
Mary	UI Design for App	Completed	11.20.2022	No	3
